Mr. Chairman:

Attached are pictures taken on September 8, 2022 of Julia Drive in Bellingham. This is another low impact subdivision designed by Allen Engineering and these pictures were taken two days after the rainstorm that dropped 6 inches in two days. The subdivision worked properly and handled that level of water. I know that board members and members of the various town committees and commissions have questions about these systems, not to mention that picturing reality from a two-dimensional engineering plan is difficult for most of us, so these may help illuminate our proposal and hopefully alleviate some concerns.

See you tonight, thanks.
