Ed Burt <eburt.hd@gmail.com>

to Kara, Jeff, Tim

Hi Kara,

Attached are some of the outstanding questions and concerns regarding the transport of the NMI materials through Hopedale's Zone II Water Protected district.

There may be some additional questions as Jeff coordinates with the Select Board and other town boards, which we can address as a follow-up.

The next Water & Sewer Commission meeting is scheduled to be held on February 9th. Responses prior to that meeting are greatly appreciated.

In the meantime, please keep us informed of any updates, and if you have any questions, please do not hesitate to contact me.

Thank you,

Ed Burt Hopedale W&S Commission

Hi Kara,

We received the response and will pass it along to the other boards for review. Please keep us informed, up to date.

Personally speaking, I'm very disappointed, and rather frustrated, that the EPA is not treating our Zone II Water Protected district with the same sense of urgency, protective measures and transparency that we believe are warranted.

Thanks,
Ed

Hi Ed,

I am writing to let you know that transportation of NMI soils through the GURR facility in Hopedale are expected to be completed by February 15, 2023. This will complete the first phase of the NMI soil excavation work (addressing the Sweeping Pile Soils, Areas of Interest [AOI] 8 and 9). I will send you another email once soil transports are finished.

We will resume soil transports through the GURR facility for the remaining NMI Site areas sometime between Fall 2023 and Spring 2024. We will be in touch prior to the start of this work.

Best,

Kara Kelly Nierenberg, PE
